OBJECTIVE

Cyber Security undergraduate with strong knowledge in network security, ethical hacking, penetration testing, threat analysis, and SIEM technologies. Passionate about securing digital assets, identifying vulnerabilities, and implementing effective security solutions through continuous learning and hands-on projects.

EDUCATION

B.E. Computer Science and Engineering (Cyber Security) KSR Institute for Engineering and Technology	2023–2027
Higher Secondary Certificate (HSC) Brindavan Matric Hr. Sec. School	2022–2023 71.5%
Secondary School Leaving Certificate (SSLC) Brindavan Matric Hr. Sec. School	2020–2021 Pass

PROJECTS

Adaptive Intrusion MFA System

- Designed and developed a Multi-Factor Authentication system using RFID technology and password validation.
- Implemented adaptive security mechanisms that increase authentication restrictions based on failed login attempts.
- Integrated LEDs and buzzer alerts to notify unauthorized access attempts in real time.
- Developed risk-based lockout durations ranging from 1 to 5 minutes for enhanced protection.

End-to-End SOC Investigation using Splunk

- Performed log collection, analysis, and correlation using Splunk SIEM.
- Investigated suspicious activities, authentication anomalies, and potential security incidents.
- Created dashboards, reports, and custom alerts for proactive threat monitoring.
- Conducted threat hunting and incident investigation using real-world attack scenarios.

Malicious URL Detector — Machine Learning

- Developed a machine learning-based URL classification system using TF-IDF feature extraction and Naive Bayes algorithms.
- Built a Flask REST API to analyze URLs and classify them as legitimate or malicious in real time.
- Integrated a Chrome Extension interface to provide instant URL security checks for end users.
- Improved phishing detection capabilities and enhanced user awareness against malicious websites and cyber threats.

INTERNSHIPS

Pargavan Cyber Solution

Jul 2025

- Conducted vulnerability assessments and penetration testing on web applications and network environments.
- Performed reconnaissance and OSINT techniques to gather security intelligence.
- Identified security weaknesses and recommended mitigation strategies based on industry best practices.
- Gained practical exposure to web application security testing and cloud security fundamentals.

United Soft Tech

Jun 2024

- Completed intensive training in Machine Learning and Deep Learning concepts and applications.
- Developed AI-driven models for data analysis and predictive tasks.
- Explored the role of Artificial Intelligence in cybersecurity automation and threat detection.
- Worked with Python-based tools and frameworks to build intelligent solutions.

CERTIFICATIONS

- **NPTEL Swayam:** Introduction to Industry 4.0 and Industrial IoT (Elite + Silver)
- **Red Team Leaders:** Certified Red Team Operation Management (CTROM)
- **Cappriciosec University:** Cybersecurity & Ethical Hacking
- **EduSkills:** Ethical Hacking Virtual Internship
- **Forage:** Cybersecurity Analyst Job Simulation

TECHNICAL SKILLS

Programming Languages: Java, Python

Web Technologies: HTML, CSS

Database: MySQL

Cybersecurity Tools: Nmap, Wireshark, Burp Suite, Git, Splunk

Core Concepts: Penetration Testing, Vulnerability Assessment, Network Security, SIEM
